How to generate thematic maps with the **CGIS Map Production** system

1. Open the sidebar menu

Click on the left sidebar to open the map generation wizard.

2. Give your map a title

Click on the “ENTER MAP TITLE” text box and give a name for the map to be created.

6. Select the data type

Specify the datatype of the chosen attribute (categorical or numerical data). If “categorical” is chosen a dropdown list will appear below the data type radio buttons as shown below. Note that this step requires the user to know the datatype of the attribute to be used in the map generation process.

8. Select the type of map

Select the type of map to be generated (a “CHOROPLETH” map for example) by clicking on the image corresponding to the map to be generated. Then click on the “Next” button.

9. Specify the standardization method

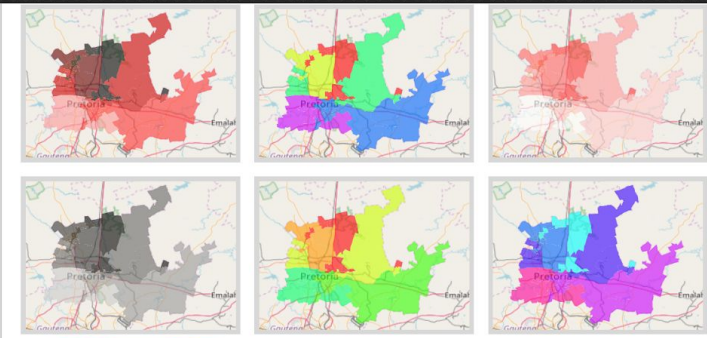

If the attribute to be displayed consists of numerical data (as specified during step 6), click on the dropdown list and select the standardization method to be used to standardize the data.

10. Specify the number of classes

If the attribute to be displayed consists of numerical data (as specified during step 6), enter the number of classes to be used to display the data on the map.

12. Generate final map

If the attribute to be displayed consists of numerical data (as specified during step 6), then one would have the option available to choose between various maps created with different classification methods and the different number of classes. The columns show maps generated with the different number of classes and the rows are the corresponding maps generated for different classification methods.

Choose a final map to be generated and then click on it. Then click on the “Generate Map” button to generate the final thematic map.

13. View map legend

The right sidebar will automatically open after generating the final map. From the sidebar (the map legend) one can view the map title and other metadata. There is also an option to view the map key, an option to create a new map, and a button to download the final map as PNG.

To view the map key, generate another map, or download the final map simply click on the corresponding icons.
