How to generate thematic maps with the **CGIS Map Production** system

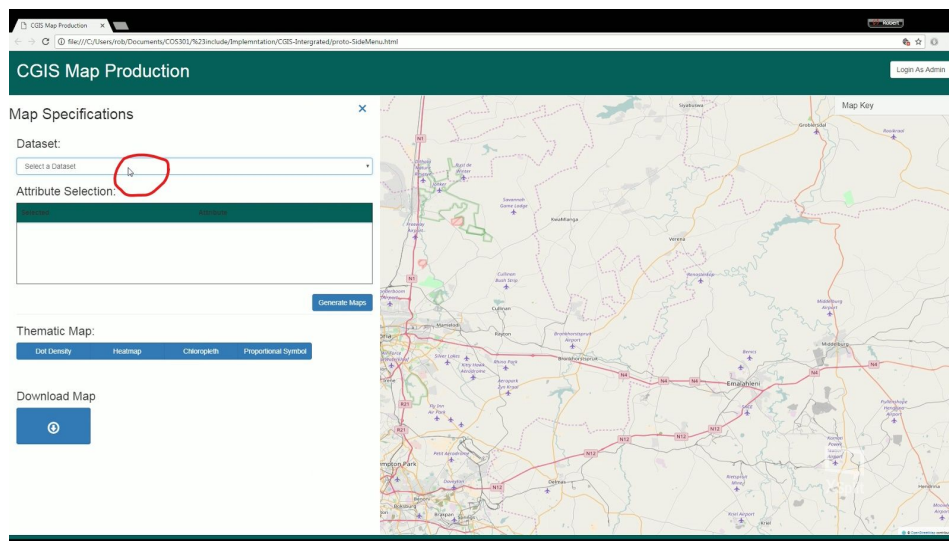

1. Open the sidebar menu

Click on the sidebar to open the menu.

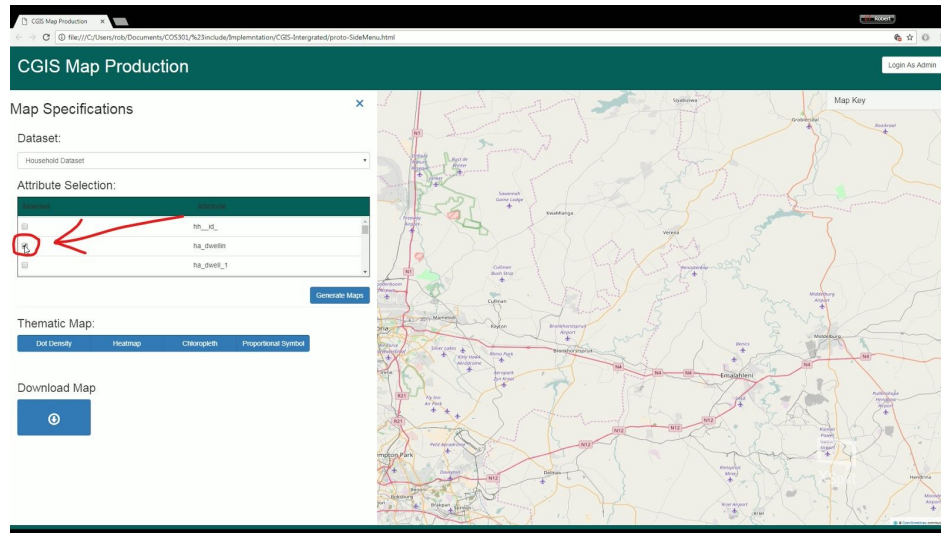

2. Select a dataset

Click on the “Select a Dataset” dropdown list and then select the dataset to be used.

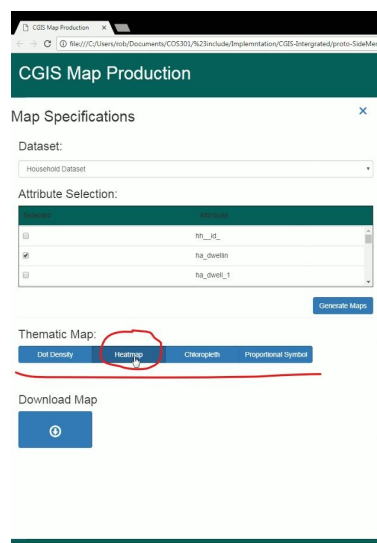

3. Select an attribute

Select an attribute from the chosen dataset for which to generate the thematic maps.

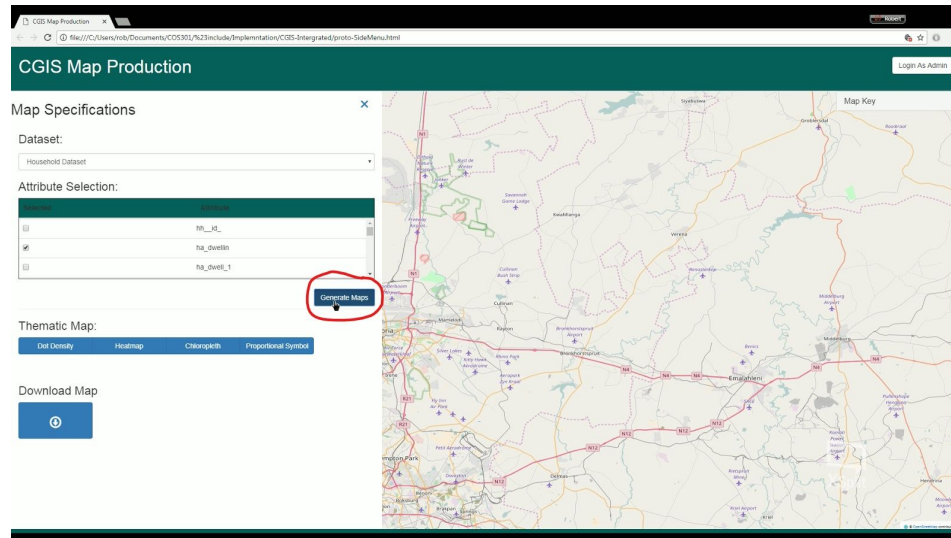

4. Choose the type of map to be created

There are 4 thematic map types to choose from. These include “Dot Density”, “HeatMap”, “Choropleth”, and “Proportional Symbol” map designs. Choose any map type by clicking on the appropriate button.

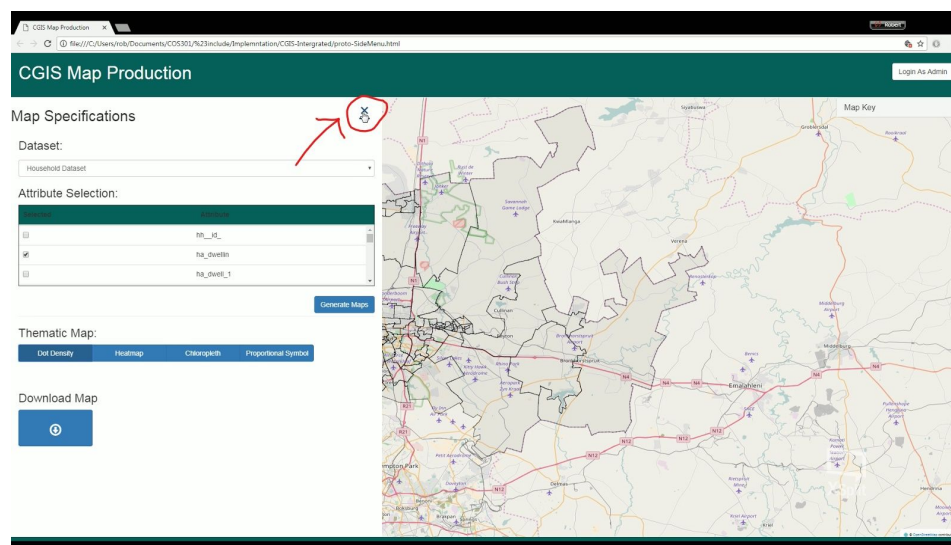

5. Click “Generate Maps”

Click the “Generate Maps” button.

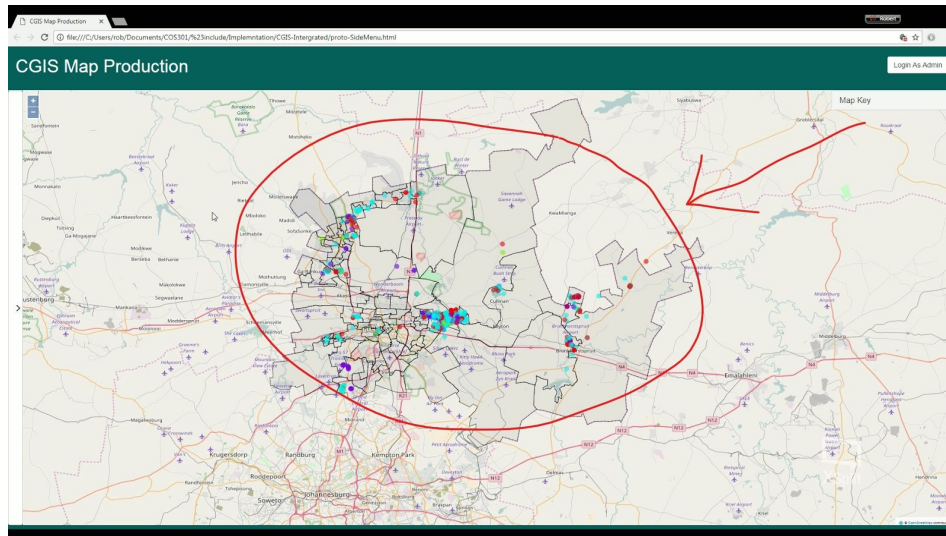

6. Close the menu

Close the sidebar menu by clicking on the “x”.

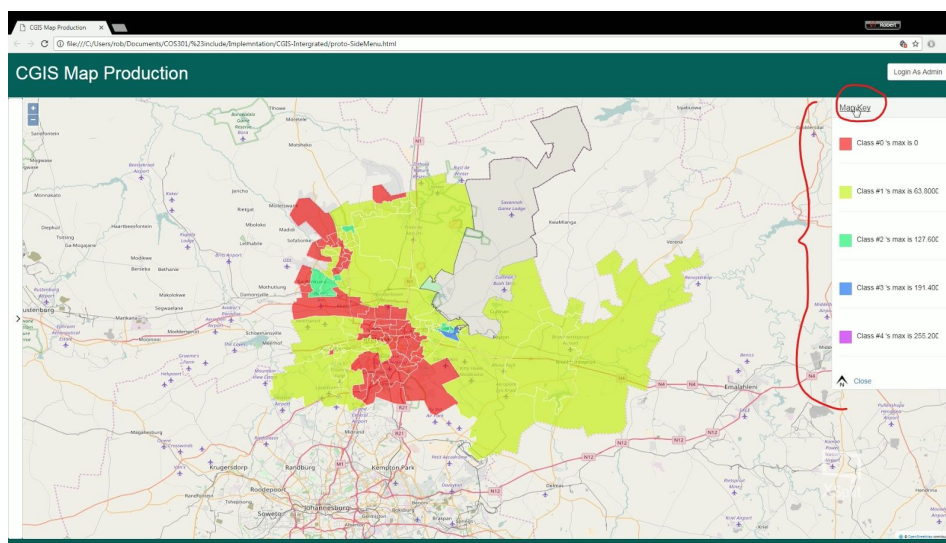

7. View the result

Your custom map will then be displayed automatically. This is an example of a generated dot density map.

8. View the map key

To open or view the map key click on "Map Key" in the top right corner of the screen. This is an example of a generated choropleth map.

9. Download Map

To download the generated map as an image click on the “Download Map” button.
